**Midterm Concept
Dario Narvaez**

- 1 ■ This application is inspired by the Pixar Movie “UP”. The goal is to take the house to the top of the cliff by adding balloons in order to make the house float. (This will reduce the mass of the house and it will make it float).

2. It will possible to apply wind in order to make the house change direction. The balloons behave as particles with random movement (affected by wind).

3. It will be also possible to make the balloons explode in order to make the house fall into the desired position.
